

COMPOSITE

Fluid Transfer LLC

FiberFlex-11, leading the fluid transfer industry
Lightweight • Flexible • Quick Connect

When a leak free, durable and portable fluid transfer system is required, FiberFlex - 11 is the answer.

A 30 ft. joint of FiberFlex-11 meets OSHA's two man weight limit. This lightweight design combines the durability of polyethylene and strength of continuous glass fibers to produce a 10.5" I.D. while maintaining 250 wpsi.

FiberFlex-11's composite materials allow for a 90° bend over a 60 ft. span of pipe, reducing the number of angled fittings needed for a job.

FiberFlex-11's unique quick connect design allows 30 ft. joints to be installed in under 20 seconds, resulting in a leak free connection every time.
